CBM-80-UVX

Ultraviolet Chip On Board LEDs

Table of Contents

Features:

- Mosaic Array UV LED chipset with surface emitting area of 8mm^2, 2:1 aspect ratio
- Chip on board package eliminates the need for complicated assembly process
- Etendue matched to TI™ 0.65" DMDs
- Low-profile window for efficient coupling into small-etendue systems
- Vertical chip UV LED technology for high power density and uniform emission
- High thermal conductivity common cathode copper coreboard package
- Can be operated at drive currents up to 16 A
- Environmentally friendly: REACH, RoHS and Halogen compliant

Applications:

- 3D printing and Additive Manufacturing
- Machine Vision
- Fiber-coupled illumination
- Maskless Lithography
- Curing
  - Inks
  - Coatings
  - Adhesives
- Medical and Scientific Instrumentation

Technology Overview

Luminus LEDs benefit from innovations in device technology, chip packaging and thermal management. This suite of technologies give engineers and system designers the freedom to develop solutions both high in power and efficiency.

Luminus Mosaic Array LED Technology

Luminus' vertical chip technology enables LED chips with uniform brightness over the entire chip surface. The optical power and brightness produced by these densely packed chips enable solutions not just to replace arc and halogen lamps but also create novel solutions.

Packaging Technology

Thermal management is critical in high power LED applications. With a thermal resistance from junction to board of 0.5 °C/W, the CBM-80-UVX has one of the lowest thermal resistances of UV LEDs in the market. The low Rth, along with Luminus chip techology allows users to drive the LEDs at high current densities while maintaining a low junction temperature, thereby resulting in brighter solutions and longer lifetimes.

Reliability

Luminus LEDs are one of the most reliable light sources in the world. They pass a rigorous suite of environmental and mechanical stress tests, including mechanical shock, vibration, temperature cycling and humidity, and have been qualified for use in high power and high current applications. Luminus UV LEDs are designed for the most demanding applications with median lifetimes exceeding 30,000 hours.

Environmental Benefits

Luminus LEDs help reduce power consumption and the amount of hazardous waste entering the environment. All Luminus LEDs are RoHS and Halogen compliant and free of hazardous materials, including lead and mercury.

Binning Structure

CBM-80-UVX LEDs are specified for flux and peak wavelength at a drive current of 6 A (750 mA/mm^2) with a 20 ms pulse at 25°C and placed into one of the following Power Bins and Wavelength Bins.

Power Bins[1]

Color	Power Flux Bin (FF)	Minimum Flux (W)	Maximum Flux (W)
UV	H	8	9.1
	I	9.1	10.0
	J	10.0	11.0
	K	11.0	12.1
	L	12.1	13.3

Note 1: Luminus maintains a +/- 6% tolerance on power measurements.

Peak Wavelength Bins

Color	Wavelength Bin (WWW)	Minimum Wavelength (nm)	Maximum Wavelength (nm)
UV	380	380	385
	385	385	390
	400	400	405
	405	405	410

Note 4: Unless otherwise noted, values listed are typical. Devices are production tested and specified at 6 A with a 20 ms pulse at 25°C.

Note 5: While CBM-80-UVX devices are tested at 6 A, they can be driven at CW currents ranging from 200 mA to 16 A and at duty cycles ranging from 1% to 100%. Drive current and duty cycle should be adjusted as necessary to maintain the junction temperature desired to meet application lifetime requirements.

Note 6: Typical radiometric flux is for reference only. Minimum flux values are guaranteed based on the bin kit ordered. For product roadmap and future performance of devices, contact Luminus.

Note 7: Special design considerations must be observed for operation under 1 A. Please contact Luminus for further information.

Note 8: CBM-80-UVX LEDs are designed for operation to an absolute maximum current as specified above. Product lifetime data is specified at or below maximum drive current. Sustained operation beyond absolute maximum currents will result in a reduction of device life time. Actual device lifetimes will also depend on junction temperature and operation beyond maximum junction temperature is not recommended. Contact Luminus for lifetime derating curves and for further information. In pulsed operation, rise time from 10-90% of forward current should be longer than 0.5 µseconds.

Note 9: Emitting Area is for reference only and subject to change without notice.
