

SFT-14-CG

Projection LED

Features

- 1.4 mm² emitting area
- Complement to SFT-14 Red Amber (RA), Blue Pump (BP) and Blue(B) for best projection brightness and color gamut
- Matched to 0.2" / 0.3" Pico projection applications
- Drive current up to 9.1 A
- Standard 3535 SMT packages
- Low thermal resistance: 1.6°C/W
- Dominant wavelength: Phosphor Converted Green 555 nm
- Flat surface emission for high collection efficiency

Applications

- Suitable for micro-display sizes 0.3x" and 0.2x"
- Medical / Life Science
- Industrial
- Transportation / Beacons
- High performance illumination
- Specifically engineered for stand alone, embedded, or battery-assisted projection display applications

Ordering Information

Ordering Part Numbers¹

Color	Luminous Flux		Ordering Part Number
	Minimum Flux Bin	Minimum Flux	
Converted Green	2G	455 lm	SFT-14-CG-F35-MPG650
	2H	490 lm	SFT-14-CG-F35-MPH650
	2J	530 lm	SFT-14-CG-F35-MPJ650

Part Number Nomenclature

SFT

14

CG

F35

<Bin kit>

Product Family	Chip Area	Color	Package Configuration	Bin Kit
SFT: Surface-Mount Flat-Top	14: 1.4 mm ²	CG: Converted Green	F35: 3535 EMC SMD See Mechanical Drawing section	Refer to ordering part numbers in this document

Notes:

1. Flux Bin listed is minimum bin shipped, higher bins may be included at Luminus' discretion.

Binning Structure

Luminous Flux Bins^{1,2}

Flux Bin ³	Binning @ 0.98 A, T _c = 25°C ⁴	
	Minimum Flux (lm)	Maximum Flux (lm)
2G	455	490
2H	490	530
2J	530	580
2K	580	625

Notes:

1. Luminus maintains a +/- 6% tolerance on flux measurements.
2. Products are production tested then sorted and packed by bin.
3. Individual bins are not orderable.
4. T_c = Case temperature.

Characteristics

Parameter ($I_f = 0.98 \text{ A}$, $T_c = 25^\circ\text{C}$)		Symbol	Values	Unit
Light Emitting Area		A_E	1.40	mm ²
Peak Luminous Flux ¹		Φ_V	530	lm
Peak Radiometric Flux ¹		Φ_E	1.14	W
Forward Voltage	Minimum	$V_{f \text{ min}}$	2.5	V
	Typical	$V_{f \text{ typ}}$	3.0	
	Maximum	$V_{f \text{ max}}$	3.6	
Dominant Wavelength	Minimum	$\lambda_{d \text{ min}}$	545	nm
	Typical	$\lambda_{d \text{ typ}}$	555	
	Maximum	$\lambda_{d \text{ max}}$	565	
FWHM		$\Delta\lambda_{1/2}$	100	nm
Chromaticity Coordinates (Full spectrum) ²		CIE x	0.33	
		CIE y	0.56	
Chromaticity Coordinates (Filtered spectrum) ^{2,3}		CIE x	0.31	
		CIE y	0.63	
Real Thermal Resistance (Junction to Case) ⁴		$R_{th \text{ JC real}}$	1.60	°C/W
Electrical Thermal Resistance (Junction to Case) ^{4,5}		$R_{th \text{ JC elec}}$	0.92	°C/W

Notes:

1. Typical flux at typical dominant wavelength.
2. CIE 1931 chromaticity diagram coordinates, normalized to X+Y+Z=1.
3. Optical filter of 50% cut off range between 580 nm and 600 nm applied in typical projection display engine.
4. Thermal measurements are in accordance with JEDEC 51-14.
5. For optimal results, Luminus recommends customer PCB Design per guidelines from Luminus application note, "Design Guidelines for SFT Chipset Assembly".

Characteristics (Standard Test Condition)

Relative Luminous Flux - 20 ms pulse

Forward Current: $\phi_v/\phi_v(0.98\text{ A}), T_c = 25^\circ\text{C}$

Temperature: $\phi_v/\phi_v(25^\circ\text{C}), I_f = 0.98\text{ A}$

Forward Voltage - 20 ms pulse

Forward Current: $\Delta V_f = V_f(I_f) - V_f(0.98\text{ A}), T_c = 25^\circ\text{C}$

Temperature: $\Delta V_f = V_f(T_c) - V_f(25^\circ\text{C}), I_f = 0.98\text{ A}$

Dominant Wavelength Shift- 20 ms pulse

Forward Current: $\Delta \lambda_d = \lambda_d(I_f) - \lambda_d(0.98\text{ A}), T_c = 25^\circ\text{C}$

Temperature: $\Delta \lambda_d = \lambda_d(T_c) - \lambda_d(25^\circ\text{C}), I_f = 0.98\text{ A}$

Characteristics (Reference test condition)

Relative Luminous Flux - 1 ms pulse

Forward Current: $\phi_v/\phi_v(0.98\text{ A}), T_c = 25^\circ\text{C}$

Temperature: $\phi_v/\phi_v(25^\circ\text{C}), I_f = 0.98\text{ A}$

Forward Voltage - 1 ms pulse

Forward Current: $\Delta V_f = V_f(I_f) - V_f(0.98\text{ A}), T_c = 25^\circ\text{C}$

Temperature: $\Delta V_f = V_f(T_c) - V_f(25^\circ\text{C}), I_f = 0.98\text{ A}$

Dominant Wavelength Shift- 1 ms pulse

Forward Current: $\Delta \lambda_d = \lambda_d(I_f) - \lambda_d(0.98\text{ A}), T_c = 25^\circ\text{C}$

Temperature: $\Delta \lambda_d = \lambda_d(T_c) - \lambda_d(25^\circ\text{C}), I_f = 0.98\text{ A}$

Angular Distribution and Typical Spectrum

Angular Distribution

$I_f = 0.98 \text{ A}$; $T_c = 25^\circ\text{C}$

Relative Spectral Power Distribution

$I_f = 0.98 \text{ A}$; $T_c = 25^\circ\text{C}$

Absolute Maximum Ratings¹

Parameter		Symbol	Values	Unit
Forward Current (Pulsed) ² (Frequency > 240 Hz, Duty < 70%)	Minimum	$I_{f \text{ pulse min}}$	0.2	A
	Maximum	$I_{f \text{ pulse max}}$	9.1	
Forward Current (CW) ^{3,4}	Minimum	$I_{f \text{ CW min}}$	0.2	
	Maximum	$I_{f \text{ CW max}}$	7.7	
Forward Surge Current (Pulsed) ^{2,3,4} Frequency > 240 Hz, duty cycle < 10% or t = 1 ms		I_s	9.8	A
Junction Temperature		T_j	150	°C
Storage Temperature Range		T_{stg}	-40 to 100	°C
ESD withstand Voltage ANSI/ESDA/JEDEC JS-001 (HBM, Class 2)		V_{ESD}	2	kV

Notes:

1. All ratings are based on standard testing conditions at drive current 0.98 A, 20 ms single pulse at $T_c = 25^\circ\text{C}$.
2. In pulsed operation, rise time from 10% to 90% of forward current should be larger than 0.5 microseconds.
3. Product performance and lifetime data is specified at recommended forward drive current. Sustained operation at or near absolute minimum current may result in a reduction of device performance and device lifetime compared to recommended forward drive current.
4. Sustained operation above maximum current is not recommended and will result in a reduction of device lifetime.

Mechanical Dimensions - Square cavity

RECOMMENDED SOLDER PAD LAYOUT

Mechanical Characteristics

JEDEC Moisture Sensitivity¹

Level	Floor Life	
	Time	Conditions
3	168 Hours	≤30°C / 60% RH

Notes:

1. Please note that the above MSL level based on the MSL qualification rating.

Soldering Profile

SMT Solder Rework Temperature Guidelines

Parameter	Manual Hotplate Reflow	Hot Air Gun Reflow
Heating Time	< 60 sec	
Hotplate Temperature	< 245°C	< 150°C

Notes:

- The numbers in the table are specific to SAC305. Luminus recommends using an SAC305 solder paste with a no-clean flux for RoHS compliant products.
- Use of a multi-zone IR reflow oven with a nitrogen blanket is recommended.
- Time-temperature profile of the reflow process showing the four functional profile zones are defined in IPC-7801. All the temperatures refer to the application PCB measured adjacent to the package body.
- The actual profile shall be optimized per the PCB design and configuration.
- Key visual and LED performance characteristics to consider include solder bridging, solder voiding, solder balling, LED component placement or shifting, potential contamination that may impact light emissions, and the functional performance of the LED.
- Luminus recommends to use the solder paste data sheet information as a starting point in time-temperature process development.
- These are general guidelines. Consult the solder paste manufacturer's datasheet for guidelines specific to the alloy and flux combination used in your application. For more information, please refer to: <https://luminusdevices.zendesk.com/hc/en-us/articles/360060306692-How-do-I-Reflow-Solder-Luminus-SMD-Components->
- For any technical questions about soldering process, please contact Luminus at techsupport@luminus.com.

Tape and Reel Outline

Parameter	Dimension (mm)
B0	4.00 ± 0.10
K0	1.20 ± 0.10
P0	4.00 ± 0.10
P1	8.00 ± 0.10
P2	2.00 ± 0.05
T	0.30 ± 0.05
E1	1.75 ± 0.10
F	5.50 ± 0.05
D0	1.55 ± 0.05
D1	1.55 ± 0.05
W	12.00 ± 0.10

Parameter	Quantity (pcs)
Pieces per reel	250
	500

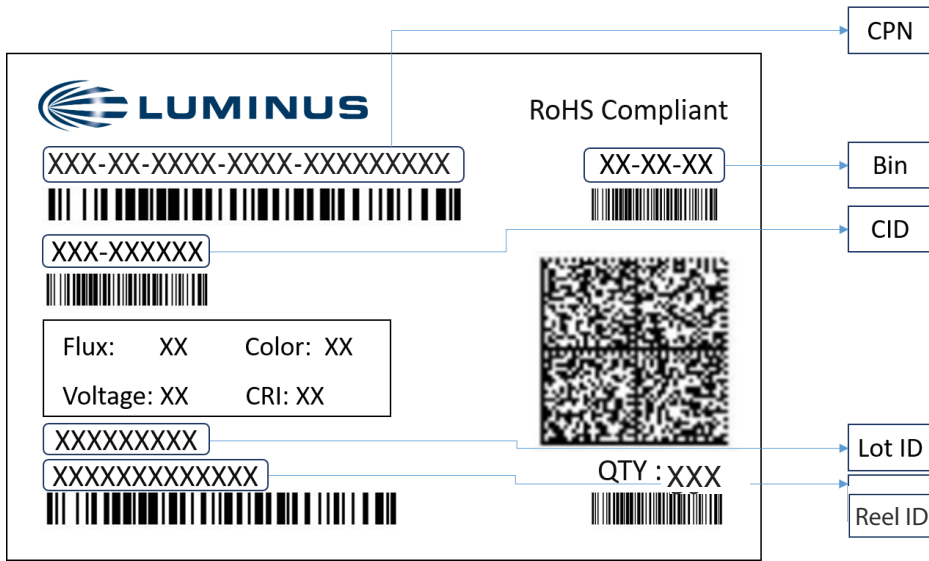

Notes:

1. The quantity per reel is not orderable.
2. Minimum order quantity: 500 pcs.

Shipping Label

Label Fields:

- CPN: Luminus ordering part number
- CID: Customer's part number
- QTY: Quantity of parts per reel
- Flux: Bin as defined on page 3
- Voltage: N/A
- Color: N/A
- CRI: N/A
- Lot ID & Reel ID: For Luminus internal use

Packing Configuration:

- Maximum of 500 devices per reel
- Each reel is enclosed in anti-static bag
- Shipping label is placed on top of each reel
- Partial reel may be shipped

Packaging

Packaged Reel

Packaging boxes

Notes

Environmental Compliance

Luminus complies with RoHS and REACH. Luminus is committed to selling environmentally friendly and sustainable products. We do not use harmful or hazardous substances in our composites and products. Luminus will not intentionally add the following restricted materials to our products: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), or polybrominated diphenyl ethers (PBDE).

Static Electricity

1. The products are sensitive to static electricity, and care should be taken when handling them.
2. Static electricity or surge voltage will damage the LEDs. It is recommended to wear anti-electrostatic gloves or wristband when handling the LEDs.
3. All devices, equipment and machinery must be properly grounded. It is recommended that measures be taken against surge voltage to the equipment that mounts the LEDs.

Reference: [APN-002815](#) Electrical Stress Damage to LEDs and How to Prevent It

Storage

Please follow J-STD-033D guidance on safe storage and bake treatment.

Mechanical Handling

1. xFx series: During the pick and place process, ensure the pick-up tool does not touch any die components.
2. xBx and xSx series: During the pick and place process, axial forces on the dome (or window) should not exceed 0.5 Newtons (N).
3. PT series: During the pick and place process, ensure the pick-up tool does not touch any die components. This profile applies when attaching surface mount components.
4. SBT series: During the pick and place process, axial forces on the dome (or window) should not exceed 0.5 Newtons (N). Vapor phase soldering is not recommended as the package is not hermetic.

Eye Safety

According to the test specification risk group IEC 62471: 2006-Non-GLS under 0.98 A, this product complies to Risk group 1 (RG1) Low risk.

No photo biological hazard under foreseeable conditions.
